Goals

The school is the first learning environment which, along with the family, works to build the child's complete and harmonious personality.

The *Scuola dell'Infanzia*'s goal is to promote the development of the child's identity, autonomy, competences and the first steps towards active citizenship.

The ministerial guidelines for the *Scuola per l'Infanzia* define the general objectives, the learning objectives and their related learning targets for the development of the child's competences in every field of experience.

The Comprehensive Institute of Codogno encourages the educational continuity between the different levels of the school (nursery school, primary school and secondary school) and the integration of the school's activities and educational principles with the families, the local councils and the other local learning agencies. The school has developed a plan for integrated digital learning, which includes the use of the Google Suite for Education platform from the very first years of nursery school.

METHODOLOGY

The *Scuola per l'Infanzia* designs its activities in line with the goals set by the school vertical curriculum:

- games, stories, movies, music and songs, bodily and multimedia experiences, activities aimed at problematic situations individually and / or in a group situations;
- free and guided conversations, observations, reflections and opportunities to promote an empathic attitude;
- graphic, pictorial and plastic productions, film materials and / or photos, both individually and collectively;

The school believes that a dynamic learning environment can give each child the opportunity to satisfy their needs and develop their potential, to learn how to rely on their skills, respecting the others, their times and their differences. In this way, we can offer a balanced integration of moments of care, relation and learning.
